

M290

PRODUCT NAME:
M290 SHORT TRUSS SECTIONS

Short Truss Sections

Redesigned for increased strength

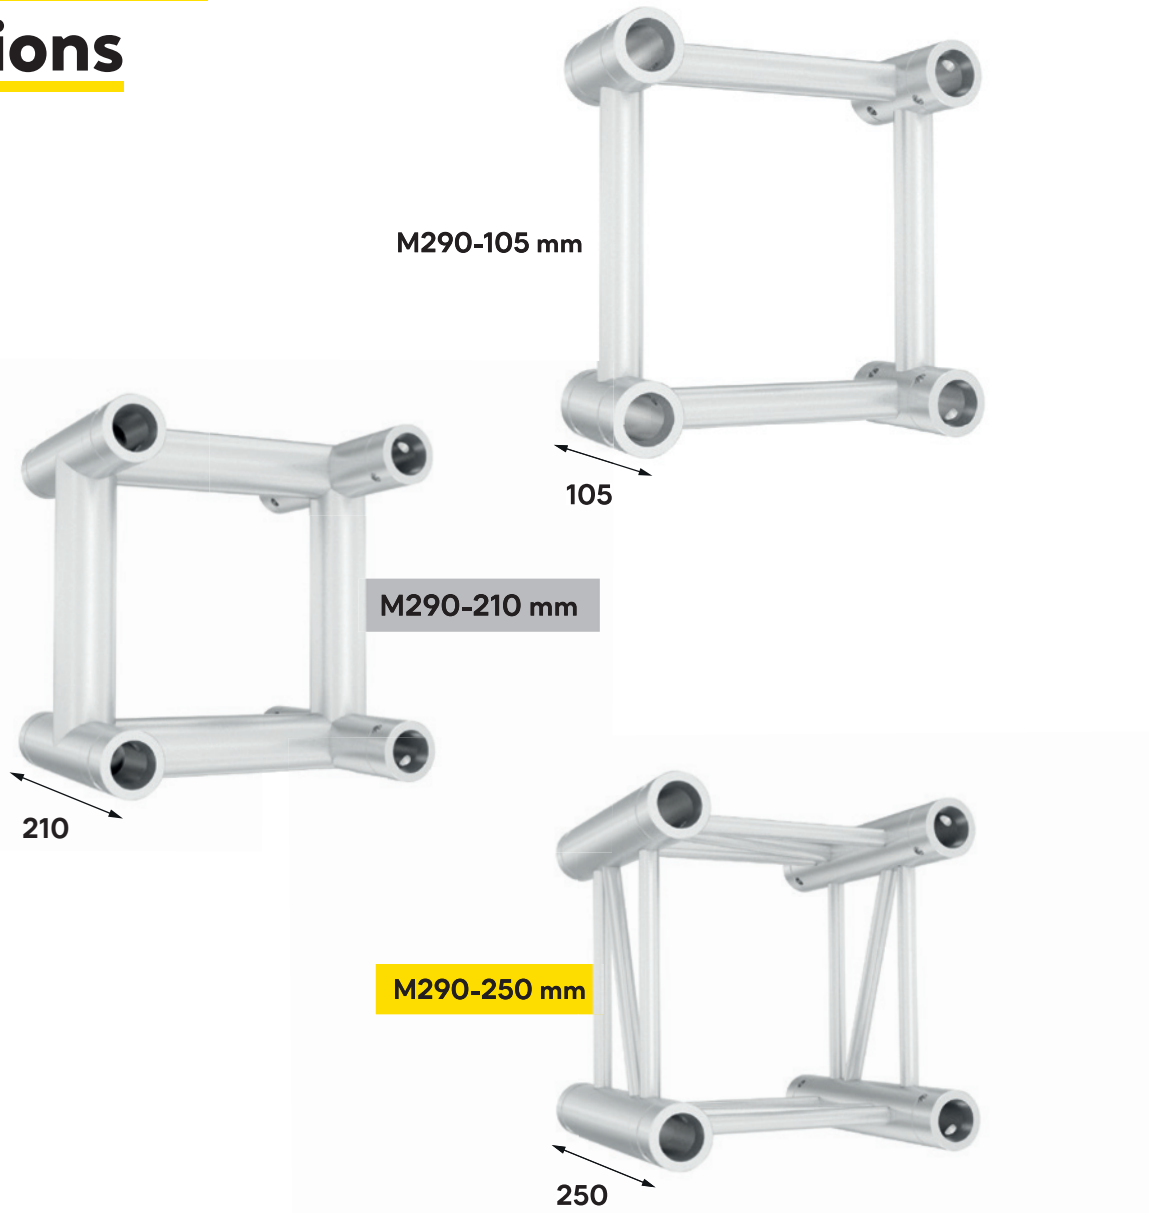

We have just introduced a redesign of the short truss sections in our M290 range (QTB, QTV, QTVF, QTVU, QTU, QTUU), which incorporates a thicker diagonal brace tube. The redesign of this tube increases the shear load capacity of the short truss section, resulting in strength equal to MILOS regular truss sections.

- Shear load capacity equivalent to regular truss
- Can be placed anywhere within your truss structure without reducing capacity
- Simplifies your planning process
- Eliminates the risk of errors during assembly
